McCarthy transports us back to the late 19th century, when the desire to capture the essence of movement captivated the minds of inventors and scientists. She introduces us to the pioneers who paved the way, like Eadweard Muybridge, whose groundbreaking photographic sequences of animals and humans in motion laid the foundation for understanding the mechanics of locomotion. The book vividly recounts the race to create the first motion picture camera, pitting visionaries like Thomas Edison and the Lumière Brothers against each other in a battle of wits and technological ingenuity.

As the camera evolved from a mere novelty to a storytelling tool, filmmakers began to experiment with the possibilities of this new medium. McCarthy sheds light on the innovative techniques that emerged, from the first narrative films of Georges Méliès to the slapstick comedy of Mack Sennett.
