What is Software Testing?

Software testing is the process of evaluating a software product to find bugs and defects. Testers use a variety of techniques to test software, including:

- **Functional testing:** This type of testing ensures that the software meets its requirements and specifications.

- **Performance testing:** This type of testing measures how well the software performs under certain conditions, such as high load or low memory.

- **Security testing:** This type of testing looks for vulnerabilities in the software that could be exploited by hackers.

Why Become a Software Tester?

There are many reasons to become a software tester, including:

- **It's a high-demand field:** The demand for software testers is growing rapidly, as businesses increasingly rely on software to run their operations.

- **It's a well-paying job:** Software testers earn a median salary of $77,200 per year, according to the U.S. Bureau of Labor Statistics.

- **It's a challenging and rewarding career:** Software testing is a challenging field that requires constant learning and problem-solving. But it's also a rewarding career that can make a real difference in the quality of software products.
